Exceptionally natural

CeUedyn 170<sup>TM</sup>bio's

purity adds lustre and credibility

to the whole organic food

and natural product market.

**The most  
«bio-connective»  
Vitamin C  
on the market**

The answer to

# Organic

criteria

### 1 - Fruit sourced from Brazil : our selection

A well nurtured and carefully harvested plant ensures the best quality extract. The acerola is cultivated in the Amazon forest, where conditions are extremely favourable to its development. Here the typical cyclical rainy climatic conditions are ideal for triggering the flowering of the acerola (about once every 25 days and up to eight times a year).

EVEAR Extraction's long agricultural experience has enabled us to seek out the most suitable sites.

### 2 - Fresh fruit squeezing : our expertise

We oblige our harvesters to collect the vitamin when the fruit is fully ripe. The acerola is not denatured by any artificial conservation process, allowing it to deliver its raw and powerful vitamin. This understanding of the plant is specific to EVEAR Extraction. Already implemented on our own growing and extraction site in the Loire Valley with a number of plants, this extraction technic generates excellent returns.

EVEAR Extraction has perfected this process to render it easily transferable and adaptable.

### 3 - Fragility of the product : our care

Pressed vitamin-containing juices are slowly concentrated at low temperatures to conserve the molecular vitality of the raw material.

The water is evaporated in a vacuum without thermal shock, and the concentration happens gently.

### 4 - The vitamin-rich extract : our jewel

Desiccation through atomisation is the last stage of extraction. Packed away from light, it is offered with a standard certified organic neutral natural excipient.

A final laboratory test ensures that the original quality is preserved.

### 5 - Organic certification : our quality

Organic labelled acerola extract enhances the effect of formulations that use it (nutritional, food supplements, pharmaceutical or cosmetic). The biological quality of our product CeUedyn 170<sup>TM</sup>bio meets strict specifications to bring you an impeccable high performance product.

### 6 - Perfectly natural : our ethics

Our acerola extract and its 17% vitamin C content are certified 100% natural. It is spontaneously recognised by the organism and needs no special effort for assimilation and elimination.

## «**bio-connective**»

## vitamine C

### **extracted from acerola for industries**

- soft drink products : energy drinks, enriched dairy products
- health foods : dietary effort and well-being products
- food supplements : supplementing daily deficiencies
- pharmaceuticals : always in search of greater efficacy and purity

The world of natural cosmetics has not been slow to catch up.  
With a growing market for its formulations, it makes increasing use  
of the vitalising qualities of vitamin C.
