**Graminex® Flower Pollen Extract™
Product Information**

Graminex's manufacturing and R&D facility is located in Northwest Ohio. Graminex has been a family owned business since 1997. The manufacturing facilities and processes are cGMP certified by NSF, with bulk products that are independently Kosher, Pareve and Halal certified.

Graminex® is the only manufacturer of flower pollen extract that uses a natural extraction process without the use of harsh solvents. This provides the purest flower pollen extracts in the market today using Graminex's motto, Keep it Clean®.

During our manufacturing process raw pollen is purified to remove any unwanted plant parti-

cles and allergens. Once this process is completed, Graminex's Flower Pollen Extracts™ are standardized to meet the exact same specifications for each batch. This allows our products to have a standard composition. All of these products may be used safely by those who are otherwise allergic or hypersensitive to other pollen products.

Flower pollen extracts can be safely and easily added to any product line in a variety of industries including; pharmaceuticals, nutraceuticals, foods, beverages and skincare. Graminex® has experience with all of these different applications and how flower pollen extracts may be applied.

Graminex® is the only non-solvent flower pollen extract manufacturer that owns and manages the source of this unique raw material directly. Growing and harvesting is carried out in the middle of some of the best farmland in the United States. Around the manufacturing facility Graminex® directly owns over 6,500 acres of farmland.

By controlling the entire process, Graminex® guarantees that our pollens are grown without the use of pesticides, fungicides, foreign substances or other harsh field applications. Our products are also 100% guaranteed to be solvent free to meet the strictest regulations that can be found. In addition to regulation requirements, the use of natural

extraction is one of many corporate commitments to an environmentally friendly and sustainable manufacturing process.

Harvest takes place over a two week period when specialized harvest equipment is used to collect the pollen. Once the raw material is dry, our processing system isolates pure pollen.

Pure pollen is then extracted naturally to release the nutrients from the pollen grain shell. In this form, our flower pollen extracts contain all the bio-available nutrients needed to form new life. These flower pollen extracts can be used for a variety of indications including; prostate health, chronic pelvic pain, urinary tract health and women's health.

Graminex's standard flower pollen extract formulas are based on ratios of amino acids and phytosterols. Graminex® has formulators to help develop custom products with our ingredients along with required additives or nutritional factors to achieve their finished product goals. Custom blended powders are manufactured on site for higher quality products and timely delivery.

Graminex® G63® Flower Pollen Extract™ – Non-solvent extracted, standardized for amino acids and phytosterols, backed by numerous clinical studies and complete toxicology studies. This powder is a turn-key formula created to include all of the beneficial health nutrients found in the pollen grain. This is a 20:1 ratio of Graminex®G60®:Graminex®NAX®.

Graminex® RCT™ Pollen Extract – Standardized for the amino acids with high SOD activity. This powder is specifically formulated for menopause and PMS health applications.

Graminex® G60® Flower Pollen Extract™ – Standardized for the amino acid portion. This powder is water soluble and has applications in capsules, tablets, foods and beverages.

Graminex® NAX® Flower Pollen Extract™ – Standardized for phytosterols that have been concentrated from natural phytosterols found in the pollen grain. This formula is available as a paste with applications in capsules, tablets, foods and skincare.

Graminex's founding principle is dedication to providing the best customer service in the industry. Customer service is part of the package when choosing Graminex for your supplier.

This starts by manufacturing the highest quality flower pollen extracts in our cGMP approved facility, guaranteeing no solvent residue. Our pollen process is completely managed by our quality control departments from harvest to finished packaging. The quality department rigorously tests our raw materials at every step of the process to ensure specifications are met. Products are shipped to customers only after quality control approval.

Once a product is manufactured for a customer, Graminex® has a dedicated regulatory affairs department. This department specializes in registrations and certifications required for international sales. This process may include basic documentation requirements or complex registration documents upon request.

Graminex's unique staff and experience helps to facilitate the process of adding flower pollen extracts to product lines. Continued customer support by our staff is a priority to ensure that Graminex® Flower Pollen Extracts™ are represented in the marketplace at the highest quality level possible.
