Organic agave syrup

pure organic agave

Agave syrup is obtained from Mexican agaves by boiling down the juice of the plant to a syrupy liquid. Agave syrup comes in various shades of color from clear to dark brown, with a correspondingly more caramel taste the darker it is. The syrup is often used to sweeten food and is soluble in cold and hot water. Due to its high fructose content, the sweetening power of agave syrup is somewhat higher than that of conventional sugar.

Organic maple syrup

- (also available in conventional)

pure organic maple

Maple syrup is extracted from the sugar maple, black maple and red maple trees, which are found almost exclusively in Canada. By carefully piercing the bark of the tree, some of the sap can be extracted without harming the tree. A tree only ever releases as much sap as it itself does not need to survive. The extracted sap is boiled down until a syrup remains, giving it its distinctive characteristic flavor. The sweetness of maple syrup is about 60-65% compared to table sugar. Maple syrup contains valuable nutrients, including vitamin C, which are largely preserved by the gentle processing.

Organic rice syrup

pure organic rice

For the production of rice syrup, rice is finely ground and boiled with water. The coarse components are then filtered out and the liquid part is boiled down until a syrup is formed. Due to its almost neutral taste, rice syrup can be used in a variety of ways to sweeten all kinds of foods. Rice syrup is fructose-free and rich in minerals such as magnesium, potassium and iron.

Organic coconut b. syrup

pure organic coconut blossom

Coconut blossom syrup is obtained from the flower of the coconut palm. For this purpose, the flower bud is cut, from which a juice emerges - the so-called coconut nectar. This is then boiled down until a brown syrup is produced. Valuable ingredients such as potassium, magnesium, iron, zinc and copper are largely retained. Coconut flower syrup is particularly popular for refining desserts, waffles or pancakes. However, the caramel taste can also provide a special touch when baking or making barbecue marinades, for example.

Organic date syrup

pure organic date

Date syrup is one of the oldest sweeteners available today, with a unique fruity flavor of its own. It has vital substances such as potassium, calcium, magnesium, iron, beta carotene, vitamin D, C, B3, B5, folic acid, phosphorus and sodium. To make date syrup, dates are heated with a little water, mixed and pressed through a filter to separate the seeds and other insoluble matter from the nectar.

Although date syrup has been known in other parts of the world for thousands of years, interest in date syrup has only recently increased in the Western world.

Organic honey

Honey powder & granules

- (also available in conventional)

pure organic honey

The honey bee flies out to collect nectar, which it thickens with its own enzymes on its return and encloses in honeycombs. After the honey is ripe, it is harvested by the beekeeper and then cold spun. Through this gentle process, the valuable ingredients in the honey are completely preserved. The "golden juice" is used in many ways as a sugar substitute, for example to refine desserts, muesli, drinks or baked goods. Honey is also popular as a spread on bread. Likewise, honey is used in a variety of ways for alternative remedies such as fennel or Manuka honey.

Organic honey

NATURLAND

pure organic honey

Our Naturland certified honey stands for eco, social and fairness.

With regard to the sustainability aspect, ecological, social and economic factors are summarized, from which Naturland has derived standards. Naturland bases its standards on internationally applicable norms.

For certification, honey farmers must adhere to strict standards for cultivation, animal husbandry and food processing, as well as to the specified social and fair trade standards. With the help of these standards, the central aspects of sustainability are covered, which are becoming increasingly relevant for the honey trade.
