

CC food is used in the food and beverage industry, and is widely applied in the production of cheese, beer, drinking water, pickled fruits and vegetables, and canned foods.

CC farm is specifically formulated for agricultural use. It is an ideal nutrient for fruits, vegetables, legumes, tubers, and other crops to boost plant health and resilience.

CC tech is specially developed for technical and industrial applications. It can be used for wastewater treatment, paper production, concrete setting, polymer production, oil and gas extraction, and dehumidifying.

CC road is the grade of choice to deal with difficult road conditions in a safe and economical way. It can be used for dust binding of roads and sports arenas, and for de-icing during winter.
